

**FOURTH DIMENSION**  
expert resource

**Productivity**

We see opportunities, not problems

# Increasing Productivity

## Need a fresh, expert review of your costs?

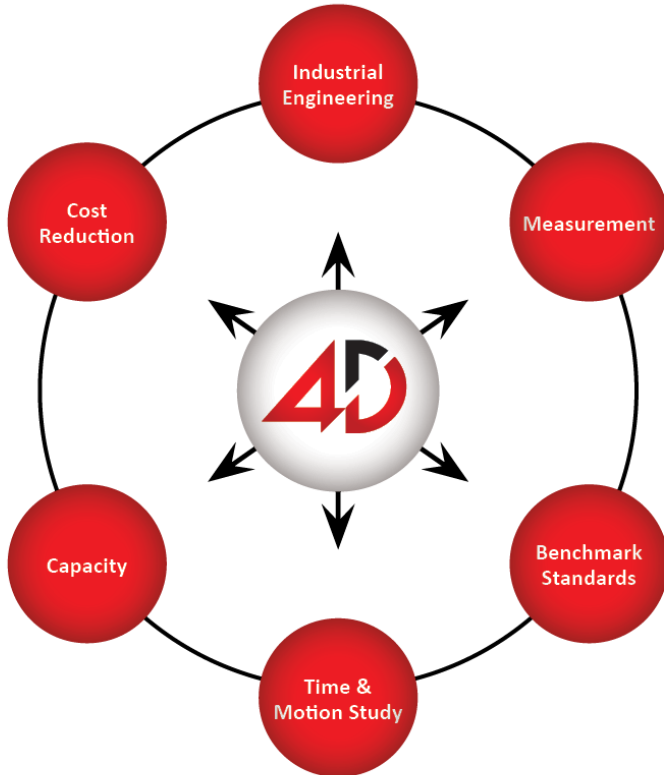

4th Dimension works with your management team to establish a set of productivity measures that will:

- help your management team reduce costs and predict capacity constraints
- set targets and expectations for your people
- establish a maintainable baseline that is above current performance levels
- be the framework to deliver performance improvement

Our team of productivity experts analyse utilisation, effort and method across all processes within a broad range of industries to deliver a measurable increase in productivity.

4th Dimension's approach overcomes any initial concerns about the time, resources and budget required.

# Expertise

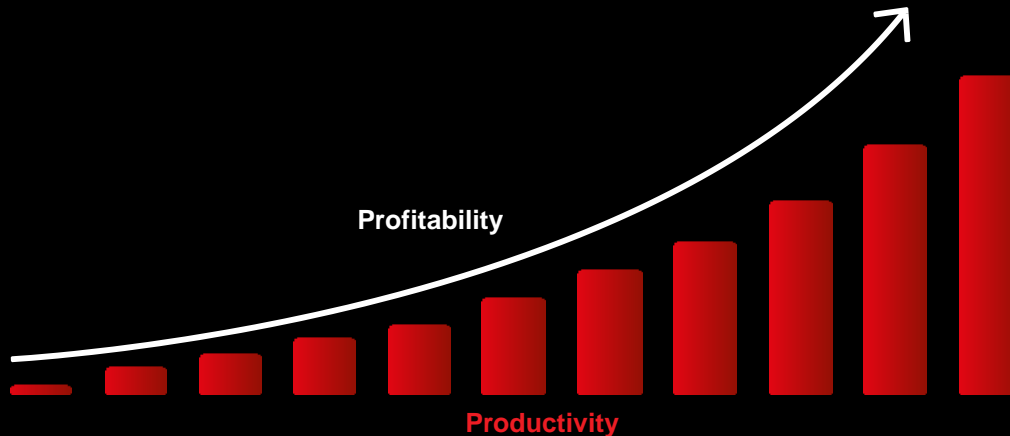

We provide you with an insight that your team never get the time or opportunity to have, with the freedom of an independent, external perspective:

- observing and measuring methods, with a close attention to detail
- mapping processes and value streams
- communicating and working closely with your people to translate their knowledge
- analysing and dissecting large amounts of data
- presenting fact-based, concise and expert conclusions

# Benchmarking

We can quickly and effectively present to you our UEM productivity index to help you assess current performance levels and quantify the benefits to be gained from further productivity analysis.

- **Utilisation** — to what extent are you maximising the productive time of people, process and equipment?
- **Effort** — how are your people applying themselves to the required task, set against an international standard?
- **Method** — are the operating procedures in place, adhered to and making best use of the available resources?
